Protecting Our Farms

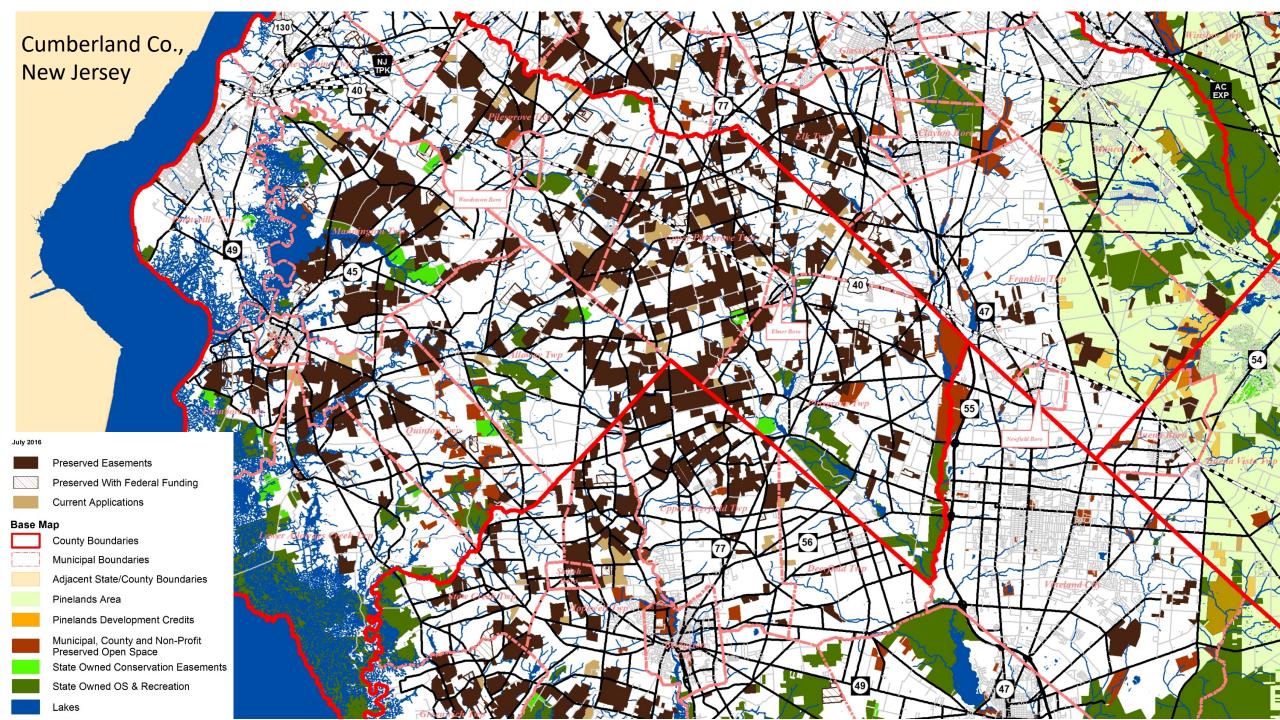

Shawn Miller, BYU

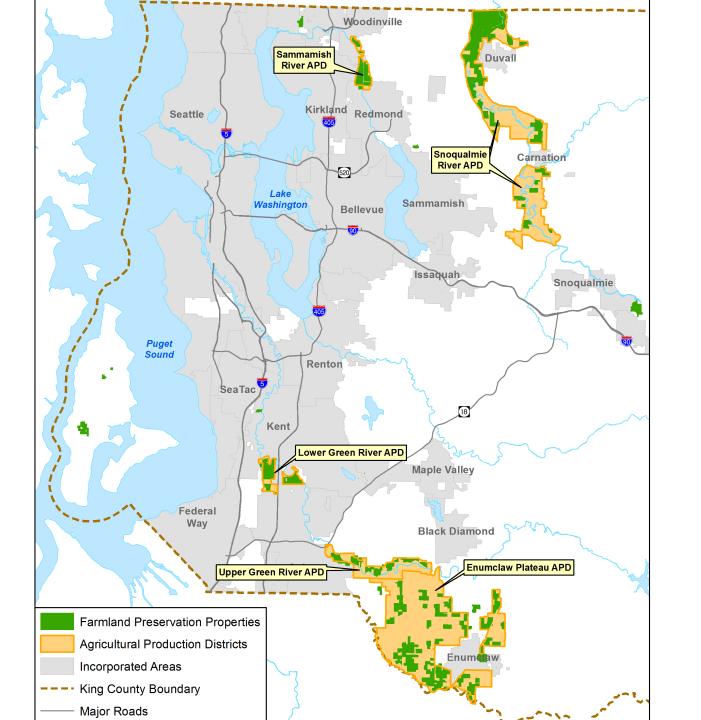

If current trends continue, all of Utah Valley's orchards and half of its farms will disappear by 2050.

King County, WA, as of April, 2013

What about Utah?

- Currently we have only 331 total conservation easements
 - A total of 17,000 acres
 - Most are wilderness, not farms
- We have easements on fewer than 40 farms and ranches
 - Many are viewsheds for summit county residents

Because Utah has so little farmland, we should be more tenacious than other states in protecting it.

Or, rather, with so much infertile land on which we can develop housing and warehousing, it makes little sense to pave over fertile farms.
